**Title**

Complementarity between clinical practice and education

---

**Abstract**

Dietitians job needs to provide a positive relationship between educational research and practice, which recognizes and benefits from the complementarity between the knowledge that educational research generates and the knowledge that teachers need to undertake their job accordingly.

Teachers' professional practice is symbolized by a commitment to attend the needs of an increasingly diverse group of learners, the use of evidence-based pedagogies and professional collaboration with all education partners.

The dietetics practice experience included on the education allows students to make clinical decisions, and the use of evidence-based practice, therefore, the complementarity between clinical practice and education allows the creation of distinct educational solutions which answers to the work challenges.
